

MEDICAL X-RAY FILM

New **RX-U**

MEDICAL X-RAY FILM

New RX-U

New RX-U is an ultra-fine grain film. It has been designed for use with blue emitting screens and is ideal for situations that require very low-noise and blue-tinted radiographic image quality.

MAIN FEATURES

1 High contrast, low fog, ultra fine grain

It yields high diagnostic quality radiographs with high contrast, low fog, enhanced sharpness and fine grain.

2 Blue tint, image clarity

New RX-U film uses the latest "Blue-tint Image Control" technology to produce images of extreme clarity.

3 Consistent high quality

Its consistent batch-to-batch quality owing to Fujifilm's fully automated production and wide processing latitude offer radiographs of uniform quality at all times.

4 Transport Reliability

Outstanding anti-static properties and surface smoothness insure reliable transport in a variety of film handling systems, including chest changers, cassetteless tables, and rapid film changers with excellent static protection.

5 Scratch Resistance

Excellent scratch resistant properties make it very easy to handle. This film is resistant to scratching in all film handling systems.
